

Over 100' reach but drives like a pumper.

The Raptor's short wheelbase allows this rescue-platform to maneuver in tight or congested streets where others simply cannot. For this reason, the Raptor was a natural fit in the narrow streets of tourist communities such as Nantucket Island, Mass.

Raptor Aerial
Quick, Agile and Strong

The perfect truck for imperfect conditions.

Conditions aren't always ideal, so the Raptor uses two different systems to enhance set-up and platform placement. The Raptor's outrigger system is the fastest in the industry, fully deploying and locking all four out-and-down jack legs in 20 seconds. Advanced CAN-bus electronics then monitor and allow safe aerial operations even when the apparatus cannot be fully jacked.

While many trucks struggle to level in hilly conditions, the Raptor uses an auto-leveling turntable that

hydraulically adjusts the base of the aerial. With these optimum level conditions, ladder climbing remains safe and easy.

Improved platform space and capabilities.

The Raptor's rescue cage has increased space, lift-up handrails and multiple egress points, including a frontal fold-down access ladder.

Quick, convenient controls.

With modern CAN-bus electronics, the Raptor's improved controls allow faster operation both inside the cage and at the turntable.

Better comfort. Better visibility.

The Raptor's display console ensures smooth and solid procedures, while the operator's seat provides a clear, comfortable view, even when the aerial is fully raised.

Making rescues easier.

The Raptor's impressive 102' reach and positioning features make it the perfect device for water and ice rescue, reaching nearly 20' below grade.

The Raptor offers a wide sweeping elevation range of -15° to 75°. Additionally, the vehicle can be purposely positioned further off-level and operates at an unbelievable -22°.

The Industry's Fastest Aerial Rescue Vehicle.

The Raptor aerial can pull into the scene, set its jacks and fully raise and extend all in less than 60 seconds. With cutting-edge outrigger and aerial speed, this unprecedented technology is available only from Rosenbauer. No matter the conditions or terrain, the Raptor immediately adapts to your needs, keeping your energy focused on the fire-ground. It's the most technologically advanced aerial in the industry. And it's Ready To Serve.™
